

## HOW TO MEASURE YOUR DOG

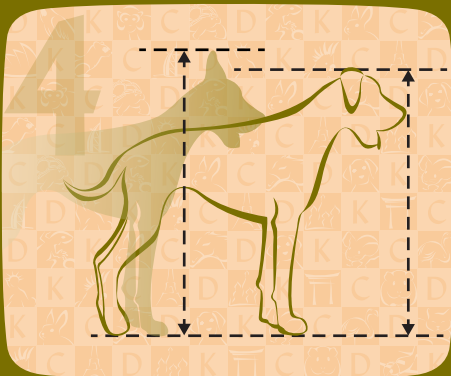

**1** LENGTH \_\_\_\_\_ cm  
From the tip of the nose to the base of the tail (i.e. excluding the tail itself).

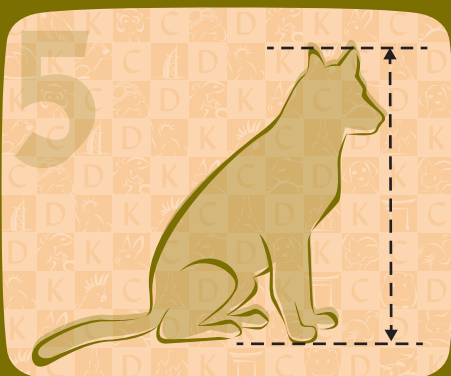

**2** LENGTH OF FRONT LEG \_\_\_\_\_ cm  
From the ground to his or her elbow (left or right will do!)

**3** WIDTH \_\_\_\_\_ cm  
With your dog standing, and you standin' over top of him or her and lookin' straight down, find and measure the widest part of his or her body, wherever that happens to be!

**4** HEIGHT STANDING \_\_\_\_\_ cm  
From the ground to his or her highest point (normally the top of the head, or in some cases his or her perky ears!).

**5** HEIGHT SITTING UPRIGHT \_\_\_\_\_ cm  
Again, from the ground to the highest point.
